ABOUT ME

I am a self-motivated and detail oriented senior software engineer with a passion for improving and modernizing technology through the use of automation and web APIs. Creative problem solving through learned experiences and research is what I enjoy most about this profession.

WORK EXPERIENCE

Senior Applications Developer

Texas Woman's University | May 2016 - Present

- Manage web applications, web APIs, and custom workflow solutions for university departments that align with the university's strategic plan throughout the entire software development lifecycle
- Integrate 3rd party software solutions with the university's information and student systems
- Team Foundation Server administrator and DevOps subject matter expert for source code maintenance and Continuous Integration/Continuous Deployment (CI/CD) implementations
- Create and maintain testing plans and application documentation for internal and external users in a centralized knowledge base

Software Applications Developer

Brierley and Partners | August 2013 - May 2016

- Provided client development, data modeling, integration and support for clients utilizing the LoyaltyWare framework
- Participated in Agile methodologies with team members to achieve goals through an entire software development life cycle
- Acted as Jenkins subject matter expert by implementing the first client code bases into Continuous Integration
- Created testing plan procedures and technical documentation
